- Re-engineered neck clamp improves durability and consistency of clamping force
- Additional standard neck options expand the tool center point options and variety of working envelopes
- Direct replacement for TOUGH GUN™ ThruArm™ G1 Series Robotic MIG Guns
- Available as a complete package — from the power pin to the contact tip
- Wire Brake, Air Blast and TOUGH GUN I.C.E.™ Technology are available options for select models

Designed for today's through-arm style robots, the TOUGH GUN™ TA3 Robotic Air-Cooled MIG Gun combines the most valuable product options of our TOUGH GUN ThruArm™ G1 and G2 Series Platforms — including our Low-Stress Robotic (LSR) Unicable — along with new features for increased strength and durability.

Unlike conventional uncables, our unique and durable LSR Unicable incorporates a rotating power connection that allows for stress-free rotation. A protective conduit contributes to the longevity of this cable by shielding its components from harsh welding environments.

2 year warranty on LSR Unicable

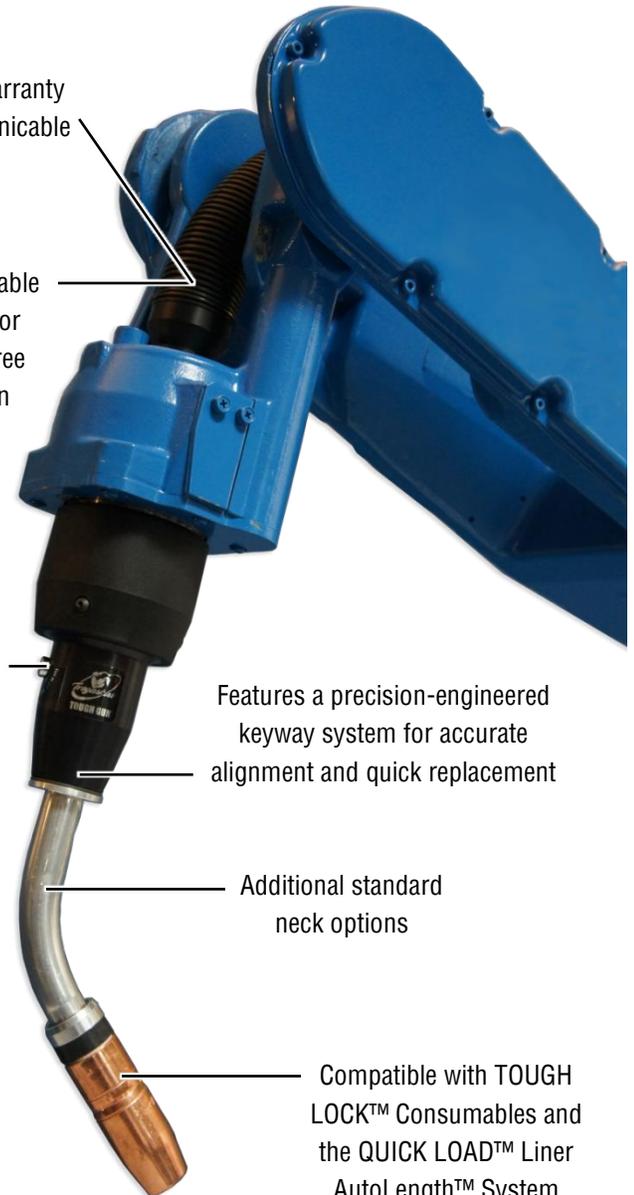

LSR Unicable allows for stress-free rotation

Re-engineered neck clamp improves durability and consistency of clamping force

Features a precision-engineered keyway system for accurate alignment and quick replacement

Additional standard neck options

Compatible with TOUGH LOCK™ Consumables and the QUICK LOAD™ Liner AutoLength™ System

Know Your Options

What's the difference between clutch and solid mount?

A clutch mount is designed to trigger an emergency stop in the event of a robotic collision, whereas a solid mount is not equipped with this functionality. Although many of today's through-arm style robots are equipped with independent collision detection software and may not require this functionality in a robotic MIG gun, this option is sometimes selected during gun configuration as an additional safeguard.

Wire Brake

Wire brake holds wire to a consistent stick out to allow a repeatable tool center point (TCP) for touch sensing / seam tracking while the torch articulates. Selecting the wire brake option when configuring a gun will impact TCP. 40-60 psi maximum air supply is required for proper operation. Wire brake is available for wire sizes between 0.030" and 1/16", and requires the use of a jump liner (for use with conventional liners). This option is not compatible with QUICK LOAD™ Liners or the QUICK LOAD Liner AutoLength™ System.

TOUGH LOCK™ Consumables

This system features our innovative TOUGH LOCK Contact Tips and Retaining Heads. TOUGH LOCK Contact Tips are precision-machined using a process that tightly controls tip tolerances, and TOUGH LOCK Retaining Heads are manufactured with a tapered design at both ends that keep consumables locked from tip to neck for improved weld consistency and to maximize heat dissipation.

QUICK LOAD™ Liners

The QUICK LOAD Liner System loads from the front of the MIG gun, and requires less than half the time and effort for replacement when compared with conventional liners. These liners interface with a QUICK LOAD Liner Retainer that is seated within the power pin of the gun on first use. QUICK LOAD Liners come standard on TOUGH GUN Robotic MIG Guns unless wire brake is a selected option. These liners are compatible with the QUICK LOAD Liner AutoLength™ System. Available for wire sizes between 0.023" and 3/32" and in lengths of up to 15 feet for robotic applications.

Air Blast

Air blast utilizes compressed shop air to clear loose debris from front-end consumables thereby reducing the frequency of nozzle cleaning. 80-100 psi maximum air supply required for proper operation. This option is not available for TOUGH GUN™ TA3 Robotic Air-Cooled MIG Guns for FANUC® robots equipped with TOUGH GUN I.C.E.™ Technology.

TOUGH GUN I.C.E.™ Technology

This technology boosts the duty cycle of our already highly robust air-cooled TOUGH GUN MIG Guns by providing water-cooled benefits through our I.C.E. (Integrated Cooling Enhancer) component. This component circulates water at the nozzle, keeping TOUGH LOCK™ Consumables running cooler and lasting longer. In the TOUGH GUN TA3 Robotic MIG Gun Series, this option is available only for FANUC® and ABB® robots. TOUGH GUN I.C.E. Technology is not compatible with TOUGH ACCESS™ Consumables.

TOUGH ACCESS™ Consumables

This sleek line of consumables (including retaining heads and nozzles) allows entry into hard-to-reach places that would otherwise be inaccessible due to fixture or weldment design. This option is not compatible with TOUGH GUN I.C.E. Technology.

QUICK LOAD Liner AutoLength™ System

The QUICK LOAD Liner AutoLength System is designed to minimize downtime, wire feeding and quality issues commonly associated with short liner length. Housed inside the power pin, this spring-loaded module applies constant forward pressure on the liner, keeping it seated properly in the retaining head. This revolutionary technology allows for up to one-inch forgiveness if the liner is too short and accommodates liner movement during welding. Available for wire sizes between 0.030" and 3/32", this new system is designed specifically for use with QUICK LOAD Liners. Not available when wire brake option is selected.

Peripherals & Accessories

TOUGH GUN TT3 Reamer

TOUGH on spatter and operates reliably in the harshest welding environments. Automating spatter removal will help extend the life of your robotic MIG guns and consumables, benefitting both your bottom line and your production uptime and throughput.

Visit Tregaskiss.com/ReamerTT3 for ordering information.

TOUGH GARD Anti-Spatter Liquid

This ready-to-use water-soluble, non-toxic product creates a sacrificial surface that reduces spatter adhesion. This prolongs the life of your consumables and minimizes downtime due to nozzle cleaning which can help reduce your operating and maintenance costs.
